PROJECTS IN DETAIL

Company:

Shopfabrik Berlin UG

Technologies:

Liquid, SCSS, jQuery, CSS, HTML5, JavaScript, node.js

Description:

We help retailers and online merchants to be successful with an online shop.

We support you in building your online shop. From the perfect technical solution to marketing.

Responsibilities:

- realization, planning, constructing of the webshop with Nuxt.js
- maintaining of the webshop
- consulting

Company:

Canlieb UG

Technologies:

Nuxt.js, vue.js, Bootstrap, Tailwind.css, JAMstack, vuex, apollo, GraphQL

Description:

I started a dietary supplement company with two friends. I was mainly responsible for IT and setting up a webshop. At this point, my intention was to work with a new technology and I decided to learn vue.js. The webshop was essentially built on a JAMstack with Nuxt.js. I used Shopify as the backend with a GraphQL layer to get data from the backend to the static hosted webshop. I finished the project and left the company due to time constraints.

Responsibilities:

- realization, planning, constructing of the webshop with Nuxt.js
- maintaining of the webshop
- setup of a Shopify backend
- setup of all IT related issues which came up during the founding
- consulting for technology stack

Freelance Projects in 2019:

Company:

NEPOS GmbH

Technologies:

Firebase (Cloud Firestore, Cloud Functions), node.js, mocha, TypeScript

Description:

Cloud function that sends personalized messages to customers to inform them about special features.

Responsibilities:

- logic development on various specifications
- programming of cloud function

PROJECTS IN DETAIL

Employment Projects:

Company:

Bird Home Automation

Technologies:

node.js, PHP, HTML5, CSS, Bootstrap

Description:

I have worked for my employer on two projects. In a team of three developers for backend PHP legacy code fixes, rewrites and maintenance. And in my own project for a new node.js based test environment which was planned for testing of physical products. I switched between this projects weekly. The test environment was heavily used for end-of-line testing of beta devices which where send to beta program customers. The hardest quest was to verify optical quality and functionality of particular parts in OpenCV.

Responsibilities:

PHP

- renewed legacy PHP code
- implementation of new back end features

node.js

- structuring, planning and implementation of the test environment
- structuring, implementation of particular specific tests in this test environment
- definiton, implementation of a Rest API for data handling to a control device
- webview in HTML/CSS/Bootstrap for control device

PROJECTS IN DETAIL

Employment Projects:

Company:

NEPOS GmbH

Technologies:

node.js, React.js, Redux, JavaScript, Webpack, jQuery, HTML5, CSS3

Description:

At Nepos I developed the hardware for a tablet together in a team of three people. In addition, my task was to create a software tool to verify the functionality of the software stack and all hardware components. The software stack consisted mainly of JavaScript frameworks.

Responsibilities:

- developed UI with webpack, HTML, CSS, jQuery for testtool
- developed the pattern for the test sequence
- worked with React/Redux to verify the right states were set

Company:

PPMnet AG

Technologies:

node.js, JavaScript, JQuery, CSS, HTML

Description:

I have developed hardware and software in a team of 4 people. The focus was on customer specific audio devices (voIP) for customers like Deutsche Bahn. I was involved in the development of the PCB layout and also in small UI's for the devices. It was a basic feature to have the ability to create a setup using a UI.

Responsibilities:

- UI/UX Design in cooperation with Designers
- Programming of the Frontend / Backend
